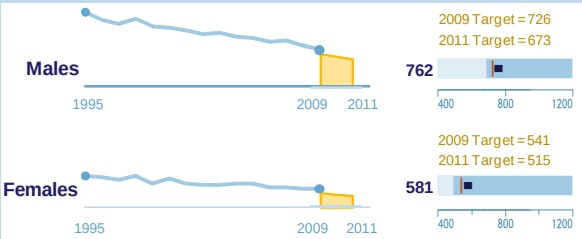
Health Inequalities Dashboard: Barnsley PCT

YHPHO
YORKSHIRE & HUMBER PUBLIC HEALTH OBSERVATORY

Mortality amenable to health care

Primary Indicators

All age all cause mortality rate (AAACM) per 100,000 pop 1995 to 2009



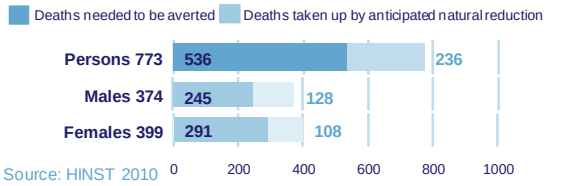
Source: Health Inequalities National Support Team (HINST) 2010

Life Expectancy Gap between PCT and England 2006-08

Source: ONS deaths database

Closer to zero = more equality within district

Deaths needed to be averted in 2010 and 2011 to hit the AAACM target

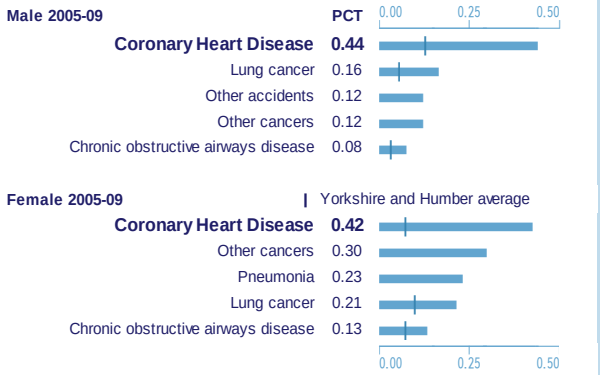


Source: HINST 2010

Conditions contributing to LE

Life expectancy at birth - years gained by cause

(assuming district has the same mortality rate as England)



For example for males in 2005-09 if Barnsley had the same mortality rate for Coronary Heart Disease as England, 0.44 years would be expected to be gained on the current life expectancy.

Source: ONS deaths extract 2010

Achievable no. of postponed deaths in one year (based on 2006-08 data)

Cardiovascular disease: Secondary prevention

4 treatments (beta blocker, aspirin, ACE inhib, statin) for all patients with previous CVD event

		M	F
Currently untreated	CHD	10	8
	Stroke	3	5
Currently partially treated	CHD	43	32
	Stroke	14	20
Additional treatment for hypertensives with no previous CVD event			
Additional hypertensive therapy		29	34
Statin treatment for hypertensives with high CVD risk		14	15
